

## Other DNA Services by

### DNA PRESERVATION

DNA preservation is here. For a small price we can preserve your DNA for up to 25 years. This could prove invaluable in the future in protecting your kith & kin from problems with inheritance, will management, ancestry and clues to chronic disorders such as Kidney or Liver diseases, Coronary artery disease and many other inherited disorders.

### ANCESTRY & FAMILY ORIGIN

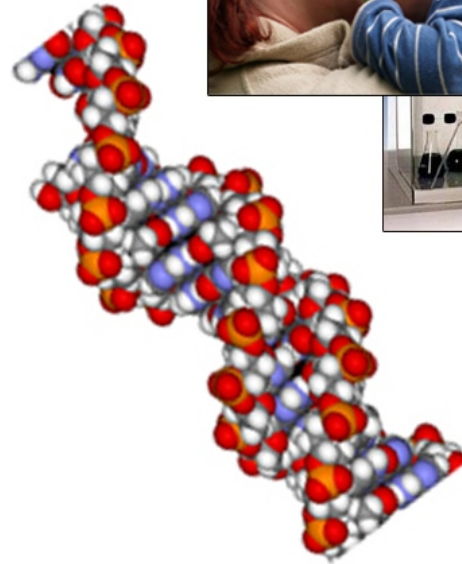

The DNA wallchart tells the story of your ancient ancestors, based on scientific analysis of DNA you inherited from your father or mother or both. This gives a complete map showing the route your ancestors took over the tens of thousands of years as the human race which is supposed to be originated in Africa, gradually peopled our planet.

### PRE-NATAL DNA TEST

This is done to identify any chromosomal abnormality in the unborn child and thus ensures a healthy baby. Consanguineous couples who have a higher probability of having children with genetic disorders, and other couples with a history of repeated miscarriages would be the ideal candidates for the test.

### MISSING PERSON'S IDENTITY

This applies to identify a missing person whose DNA profile can be matched to one of his close family members, especially his mother, father, any of the siblings or his son/daughter.

**Banish Those Doubts!**

Undisputed  
Confirmation of  
Relationship

**DNA TEST**

## WHY TAKE A DNA TEST

- To prevent disputes in adoption
- To create a record for immigration
- To foster peace of mind for all involved parties
- To obtain child support
- To determine the birth father
- To determine the birth mother
- To establish an accurate medical history for the child

## HOW ACCURATE IS DNA TESTING

DNA exists in all living cells. DNA can therefore be easily extracted from the cheek via a mouth swab or from the end of hair root. Your DNA test is not actually a single test, but is made up of several tests. Paternity DNA testing is the most conclusive method of proving biological parenthood. The tests either confirm the relationship or categorically excludes parentage.

## HOW DOES THE TEST WORK

There are a number of specific DNA regions that exist between genes that vary greatly in sequence and size from person to person. We choose to specifically analyze these regions, due to their diversity; unrelated persons are more likely to have different DNA type in each region tested. A true biological father and child will share the same DNA type in every region that's tested.

## DNA TESTING OPTIONS

- Paternity Test
- Mother & Baby Check
- Relationship Testing
- Legal Test

- DNA Preservation
- Ancestry and Family Origin
- Pre Natal DNA Test
- Missing Person's Identity

## PEACE OF MIND-PATERNITY TEST

Peace of mind tests have been developed for individuals who want to clear their doubts about a child's paternity claim. The mother's DNA sample is not needed to perform this test. These tests are low cost but accurate, confidential, pain free and only require DNA samples and a signature. Our free collection kit comes with mouth swab and simple instructions for taking DNA sample that can be completed at home by yourself and in your own time. These tests are usually more discrete with extremely high accuracy ranging from 99.9% to our super test at 99.9999%.

## MOTHER & BABY CHECK

This is used to determine the mother of an individual especially in case of a doubt of switching babies in the hospital shortly after birth. This test offers a comprehensive portfolio of DNA relationship specially between the mother and the baby.

## RELATIONSHIP TESTING

Relationship DNA testing is used to provide the probability of genetic relationships between two or more people, specifically when no other relatives are available for testing.

1. Sibling Test
  - Brother to Brother Test
  - Brother to Sister Test
  - Sister to Sister Test
2. Grandparent-Grandchild Test
3. Twin Zygosity Test
4. Aunt/Uncle DNA Test
5. 1st Cousin Analysis

## LEGAL COURT APPROVED TESTS

Disputes between individuals may require the involvement of relevant authorities demanding a DNA test. Our legal test requires identification & a medical professional to collect the DNA samples from one of our Test Centers. Contact us and we will make the arrangements for you.

Legal test results can also be used to change a birth certificate record or for immigration reasons.

Beside this, the areas where DNA results can be of great assistance are.

- Homicides
- Breaking ins
- Incest
- Rape etc.
